HAND HELD PNEUMATIC BLOW GUNS

SAFETY INSTRUCTIONS

- Our goal is to produce tools that help you work safely and efficiently. The most important safety device for this or any tool is YOU. Your care and good judgment are the best protection against injury. All possible hazards cannot be covered here, but we have tried to highlight some of the important ones.
- Only qualified and trained operators should install, adjust or use this power tool.
- This tool and its accessories must not be modified in any way.
- Do not use this tool if it has been damaged.
- If the operating pressure or hazard warning signs on the tool cease to be legible or become detached, replace without delay.

⚠ For additional safety information consult:

- Other documents and information packed with this tool.
- Your employer, union and / or trade association.
- "Safety Code for Portable Air Tools" (ANSI B186.1), available at the time of printing from Global Engineering Documents at <http://global.ihs.com/>, or call 1 800 854 7179. In case of difficulty in obtaining ANSI standards, contact ANSI via <http://www.ansi.org/>
- Further occupational health and safety information can be obtained from the following web sites:
 - <http://www.osha.gov> (USA)
 - <http://europe.osha.eu.int> (Europe)

⚠ Air supply and connection hazards

- Air under pressure can cause severe injury.
- Always shut off air supply, drain hose of air pressure and disconnect tool from air supply when not in use, before changing accessories or when making repairs.
- Never direct air at yourself or anyone else.
- Whipping hoses can cause severe injury. Always check for damaged or loose hoses and fittings.
- Do not use quick disconnect couplings at tool. See instructions for correct set up.
- Whenever universal twist couplings are used, lock pins must be installed.
- Do not exceed maximum air pressure of 6.3 bar / 90 psig, or as stated on tool nameplate.

⚠ Projectile hazards

- Always wear impact-resistant eye and face protection when involved with or near the operation, repair or maintenance of the tool or changing accessories on the tool.
- Be sure all others in the area are wearing impact-resistant eye and face protection.
- Ensure that blown particles are directed so as not to cause a hazard.
- Even small projectiles can injure eyes and cause blindness.

⚠ Operating hazards

- Always shut off air supply, relieve hose of air pressure and disconnect tool from air supply when changing accessories.

- Never put a blow gun against human skin or any opening in the human body, even if covered by clothing.
- Never use a blow gun for cleaning personal clothing.

⚠ Repetitive motion hazards

- When using a power tool to perform work-related activities, the operator might experience discomfort in the hands, arms, shoulders, neck, or other parts of the body.
- Adopt a comfortable posture whilst maintaining secure footing and avoiding awkward or off-balance postures. Changing posture during extended tasks can help avoid discomfort and fatigue.
- Do not ignore symptoms such as persistent or recurring discomfort, pain, throbbing, aching, tingling, numbness, burning sensation, or stiffness. Stop using the tool, tell your employer and consult a physician.

⚠ Noise hazards

- High sound levels can cause permanent hearing loss and other problems such as tinnitus. Use hearing protection as recommended by your employer or occupational health and safety regulations.
- To prevent unnecessary increases in noise levels operate and maintain the tool in accordance with this instruction manual.

⚠ Workplace hazards

- Slip/Trip/Fall is a major cause of serious injury or death. Be aware of excess hose left on the walking or work surface.
- Avoid inhaling dust or fumes or handling debris from the work process which can cause ill health (for example, cancer, birth defects, asthma and/or dermatitis). Use dust extraction and wear respiratory protective equipment when working with materials which produce airborne particles.
- Some dust created by power sanding, sawing, grinding, drilling and other construction activities contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Some examples of these chemicals are:
 - Lead from lead based paints
 - Crystalline silica bricks and cement and other masonry products
 - Arsenic and chromium from chemically-treated rubber
- Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: work in a well ventilated area, and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.
- This tool is not recommended for use in potentially explosive atmospheres and is not insulated for coming into contact with electric power.

DO NOT DISCARD – GIVE TO USER
